

# MoMe Gateway<sup>®</sup>

A unified remote monitoring solution **at the heart of virtual care.**

Remote patient monitoring is central to virtual care, and cardiology is among the most important disciplines to benefit. Specialized in high-fidelity cardiac monitoring data, the MoMe Gateway<sup>®</sup> **captures and transmits ECG data from connected sensors in near real-time for review by the physician.**

The Gateway, as part of the MoMe ARC<sup>®</sup> four-in-one device, was designed with patient use in mind. It has an easy-to-operate touchscreen interface with symptom reporting alerts; it also includes a built-in user guide to assist the patient.

By removing barriers between providers and their patients and enhancing remote patient monitoring, the MoMe Gateway<sup>®</sup> can **significantly improve time to diagnosis and enable more proactive interventions.**

## Introducing the MoMe Gateway<sup>®</sup>

MoMe Gateway<sup>®</sup> isn't your grandparents' cardiac monitor. **It is a bold foray into virtual telemetry that specializes in diagnostic cardiac data.**

**Familiar and easy to use device** to transmit and record data

**Durable and resistant to water damage**, decreasing the need for replacements

**Reliable and secure connectivity** to MoMe Sensors

IOT SIM with **multicarrier 4G LTE cellular network compatibility**

**Wi-Fi optional** for remote monitoring while in zero coverage areas

Support for the **lowest acuity to the highest acuity data**

# MoMe Gateway® Performance

The MoMe Gateway® offers the highest-powered performance for today's patients on the go.

Dependable data transmission is paramount when lives are on the line, so the Gateway uses reliable multicarrier 4G LTE cellular networks for continuous connections.

Out of range? Not to worry. The Gateway has internal storage for data gathered outside of cellular network range to be transmitted once connection is resumed. And optional Wi-Fi data upload for areas with no coverage.

## MoMe Gateway® Use Cases

The MoMe Gateway® has the following use cases:

1-2 Day & Extended **Holter studies**

Up to 30-day **Event Study**

Up to 30-day **MCT study**

**Clinically indicated** for all patient populations except in patients with a high risk of life-threatening arrhythmias

Embrace the future of virtual care with **InfoBionic.Ai.**

Contact InfoBionic.Ai today to learn more about the MoMe Gateway® and see how MoMe ARC® is transforming patient care.

## What's the Hype About?

Patients love the MoMe Gateway®. Here's a few of its top benefits at-a-glance:

- Can be stored in a pocket, purse, or simply in **proximity to the patient.**
- **Multicarrier compatibility** across 4G LTE networks.
- **Large intuitive touch screen** for ease of use.
- **Discreet sensors are** untethered from Gateway and easy to wear under clothing or while sleeping.
- **Simple battery management** with alerts and standard USB-C charging.
