

MoMe Solutions

Access and analyze your cardiac telemetry data, **instantly.**

The monitoring device is only a small part of enabling the future of virtual cardiac telemetry. In fact, even the most complete cardiac monitoring data cannot make a difference unless it is made usable. MoMe Solutions **supports providers in understanding and interpreting vast amounts of patient data into tangible and actionable clinical information.**

The MoMe ARC® offers industry-leading arrhythmia detection with FDA-cleared AI algorithms. Its simple and intuitive interface provides access to true beat-by-beat full disclosure for all testing modes. Data is visible from anywhere in the world via modern web browsers, with access to events and ECG tracings, even on a mobile device. 'Report' and 'Event' management is made easy with a full suite of tools for in-depth ECG analysis.

The MoMe ARC® and its advanced reporting capabilities were developed with leading clinical centers with immediate access to ECG tracings and reports without waiting for the device to be returned by the patient. **Never has data been more clear than with MoMe Solutions.**

Get to Know MoMe Solutions

MoMe Solutions enable providers to embrace **InfoBionic's vision for data-driven cardiac care.**

Convenient and HIPAA-compliant **cloud-based interface**

Full disclosure ECG data that provides the whole picture

AI-assisted analytics and visualization for immediate insight

Seamless integration with electronic medical record systems, including Single Sign-On

MoMe Analytics™*

There's more to come for MoMe Solutions. MoMe Analytics™, which is currently in development, will include: practice performance metrics (e.g., number of studies, duration, device utilization, estimated reimbursements); and performance metrics across multi-site practices and healthcare systems, which allows users to quickly see performance at any location for optimal use of inventory. Additional clinical analytics will offer the ability to quickly access information on identification of specific diagnoses and track changes in patient populations over time.

*In development

Data Integrity, Protection, and Management

Data integrity and security are of utmost importance across the healthcare landscape today. MoMe Solutions addresses all your data security concerns.

Full **HIPAA compliance**

Optional **report overread** and event management

End-to-end **data encryption**

Optional **assistance** with inventory management and shipping logistics for direct-to-patient use cases

Optional **EMR integration** with HL7 interface and custom results/data routing

Access to **billing/coding support** and pre-authorizations

Intrusion detection and active threat monitoring

Become part of the solution with **InfoBionic.Ai.**

MoMe Solutions' Unique Capabilities

MoMe Solutions is a full suite of cloud-based services, including:

- **MoMe® Reporting:** Delivers powerful data visualization and interpretation.
- **MoMe® Platform:** Provides secure access to patient data from anywhere.
- **MoMe®.ai:** Provides best-in-class AI-enabled analysis for captured ECG data.
- **MoMe® Bridge:** Connects seamlessly to electronic medical records and RPM systems.
